

LOW COST CARBON NEUTRAL POWER

Greenhouse gas emissions are the biggest driver of global warming with power generation being the largest source. People are demanding action and want emission reductions now. However, cost is a big barrier. To this end Canada Energy, the most competitive and innovative electricity retailer in Ontario, has developed a low-cost carbon neutral energy solution...

We supply you your electricity and purchase carbon offset credits to exactly match your power's carbon emissions. For only a small increase in your electricity bill (1 cent per kilowatt-hour or 7%) **you get 100% carbon neutral power at the lowest cost.** The carbon offsets are from a United Nations approved program and our system is fully audited by licensed professional accountants.

Another great thing is that **our carbon neutral program is simple.** You sign up with Canada Energy and continue to receive your power bills and service from your current electric utility. We are merely a new line item on your bill. Nothing else changes and there are no other charges or bills to pay. Your electricity service stays the same as before, except that it is greener.

We believe that it is important for green energy leaders to lead by example and inspire others. To this end **we provide at no cost to you the tools to help inspire others** – a carbon neutral power certificate, carbon neutral power stickers, and a seal of approval noting that the power you use is professionally verified as being 100% carbon neutral. This seal can be used with your stores, products, websites and corporate materials.

If you are ready to become a green energy leader or you have questions, we would love to hear from you. You can contact us at:
